Experiment 10

Aim

To optimize the performance of the Zoho Creator Library Book Issue Management application by improving form loading speed, reducing unnecessary database operations, optimizing Deluge scripts, and ensuring efficient report generation.

Procedure

1. Log in to Zoho Creator and open the Library Book Issue Management application.
2. Review the issue request forms and remove unnecessary fields, scripts, and workflows.
3. Optimize Deluge scripts by avoiding repeated database queries and unnecessary loops.
4. Use criteria-based record fetching to retrieve only the required issue records.
5. Optimize reports by displaying only essential columns and applying suitable filters.
6. Reduce unnecessary workflow executions and avoid duplicate email notifications.
7. Test the application after making changes to compare loading speed and responsiveness.
8. Verify that all library features work correctly after optimization.

Workflow Chart

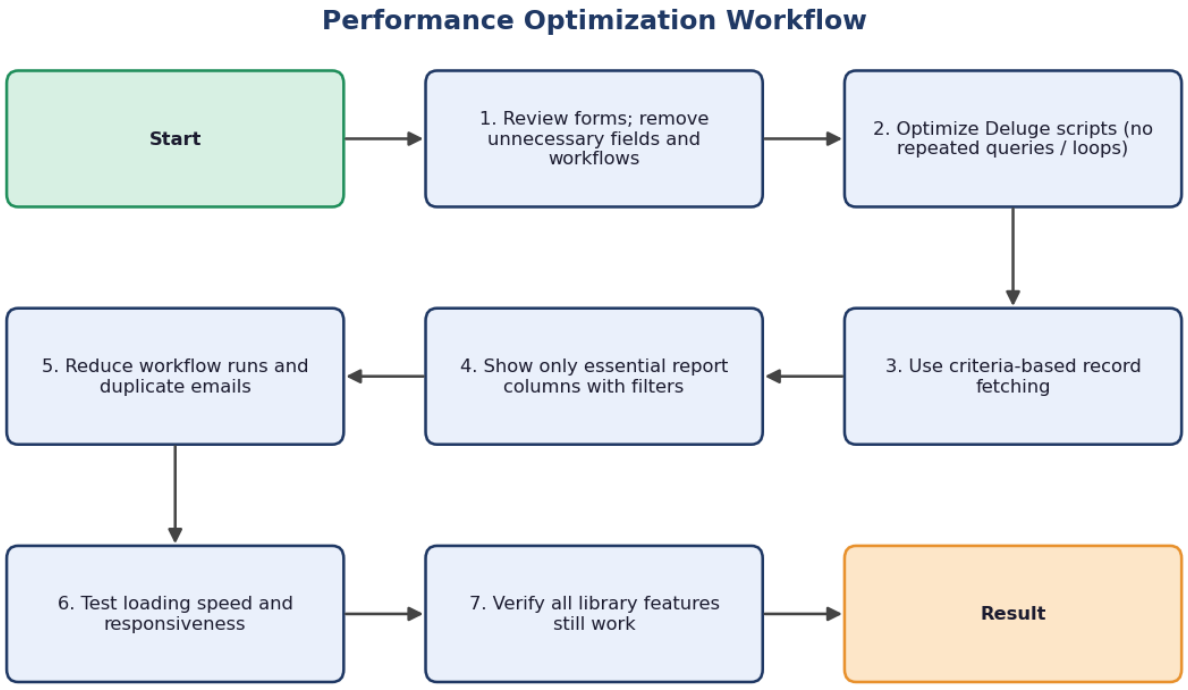

Figure 10-1: Performance optimization workflow

Before and After Optimization

Before vs After Optimization

	Before optimization	After optimization
Form fields	All fields, including unnecessary ones	Only required fields kept
Database queries	Repeated queries and loops	Criteria-based fetching, no repeats
Report columns	All columns shown	Essential columns with filters
Workflow / emails	Duplicate email notifications	Single, necessary notification

Figure 10-2: Before vs after optimization

Result

The Library Book Issue Management application was optimized by removing unnecessary fields, reducing database operations, and simplifying forms and reports, resulting in a faster and more responsive application.
