Experiment 11

Aim

To deploy and migrate the Library Book Issue Management application in Zoho Creator from a development environment to a production environment while maintaining its forms, reports, workflows, and data.

Procedure

1. Log in to your Zoho Creator account and open the Library Book Issue Management application.
2. Prepare the application: verify all forms, reports, pages, Deluge scripts, and workflows.
3. Test the application: check issue request submission, status updates, email notifications, and fine calculations.
4. Back up data: export or back up the required application data before migration.
5. Package the application: use the available deployment or export options to prepare the application for transfer.
6. Deploy the application: publish it to the Stage and then Production environment using the deployment options available.
7. Configure dependencies: verify user permissions, connections, email settings, and other required configurations.
8. Validate the deployment: test the application in the target environment to confirm that all features work correctly.
9. Complete migration: confirm that the application and required data are available in the target environment before switching users to it.

Workflow Chart

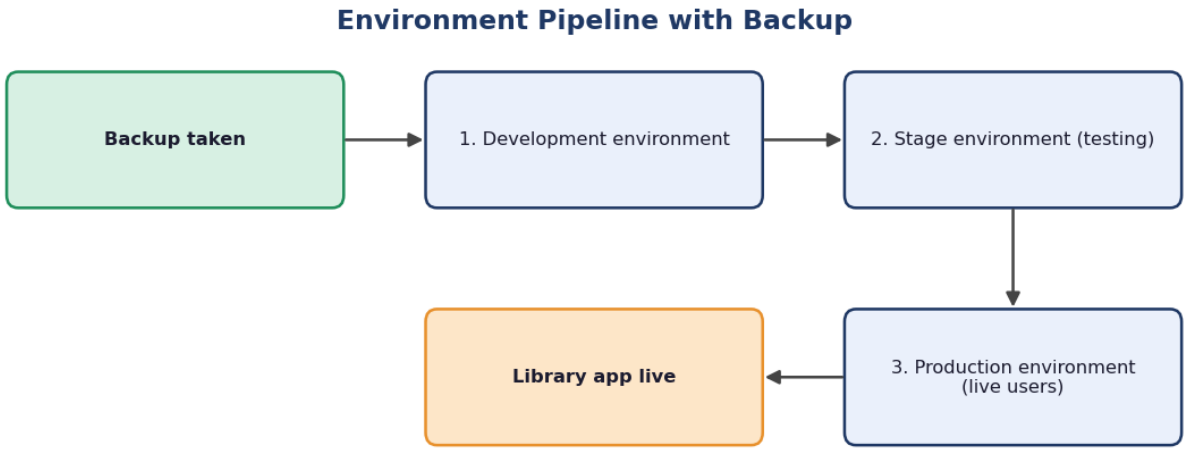

Figure 11-2: Environment pipeline with backup

Result

Application deployment and migration are completed successfully when the Library Book Issue Management application and its required configurations operate correctly in the target environment.
