Experiment 6

Aim

To design and build a single internal "Command Center" Page in Zoho Creator for the Library Book Issue Request application, demonstrating the correct usage of all eleven Page Builder elements — Panel, Board, Chart, Gauge, Search, Form, Report, Snippets, Button, Widgets, and Viewer — so that library staff have one unified workspace to monitor, manage, and act on book-issue data.

Page Elements Used

Page Element	Element Name
Panel	Command_Center_Main_Panel
Board	Issue_Status_Board
Chart	Category_Popularity_Chart_Widget
Gauge	Monthly_Circulation_Target_Gauge
Search	Book_Member_Search_Bar
Form	Quick_Counter_Issue_Form
Report	Full_Issue_Requests_Report
Snippets	Library_Rules_Return_Policy_Snippet
Button	Send_Overdue_Reminder_Button
Widgets	NewArrivals_And_ReadingRoom_Widgets
Viewer	Recommendation_Letter_Viewer

Page Name: Library_Command_Center_Page. Primary users: Librarian and Library Counter Staff.

Page Layout (Section-wise)

Section 1 — Overview Strip

- Monthly Circulation Target Gauge (Gauge element)
- Category Popularity Chart Widget (Chart element)
- Book/Member Search Bar (Search element)

Section 2 — Processing Workspace

- Send Overdue Reminder Button (Button element)
- Issue Status Board (Board element)

Section 3 — Detailed Data

- Full Issue Requests Report (Report element)

Section 4 — Reference & Quick Actions (Sidebar)

- Library Rules Return Policy Snippet (Snippets element)
- Recommendation Letter Viewer (Viewer element)
- Quick Counter Issue Form (Form element, expandable tab)

Section 5 — Operations Strip

- New Arrivals and Reading Room Widgets (Widgets element)

All sections are laid out within the Command_Center_Main_Panel, which serves as the single structural Panel wrapping the full page.

Configuration & Access Rules

- Panel (Command_Center_Main_Panel): role-based visibility so only library staff accounts can access the page.
- Board (Issue_Status_Board): each column mapped to a value of the Status field; dragging a card between columns updates the underlying record instantly.
- Chart (Category_Popularity_Chart_Widget): auto-refresh at a fixed interval so the librarian always sees current category demand.
- Gauge (Monthly_Circulation_Target_Gauge): target value configurable per month; colour changes (red to green) as issued books approach the target.
- Search (Book_Member_Search_Bar): searches Book Title, Member Name, and Register/Roll Number simultaneously.
- Form (Quick_Counter_Issue_Form): identical validation rules to the standard Book_Issue_Request_Form.
- Report (Full_Issue_Requests_Report): export-to-Excel restricted to librarian-level accounts.
- Snippets (Library_Rules_Return_Policy_Snippet): centrally managed; any edit to the rules or fine policy reflects wherever the snippet is reused.
- Button (Send_Overdue_Reminder_Button): triggers a workflow that emails only members whose Due Date has passed.
- Widgets (NewArrivals_And_ReadingRoom_Widgets): new arrivals pulled from recently catalogued titles; reading-room occupancy refreshed in real time.
- Viewer (Recommendation_Letter_Viewer): displays the latest uploaded faculty recommendation letter without a manual link update.

Workflow Summary

- Step 1: Staff open the Library_Command_Center_Page and see the Gauge and Chart for a quick status check.
- Step 2: To find a specific book or member, they use the Book/Member Search Bar instead of scrolling the full report.
- Step 3: As requests are processed, staff drag request cards across the Issue Status Board.
- Step 4: For overdue books, staff click the Send Overdue Reminder Button to trigger reminder emails.
- Step 5: For a walk-in member, staff use the Quick Counter Issue Form directly from the command center.
- Step 6: For deeper analysis or export, the librarian scrolls to the Full Issue Requests Report.
- Step 7: When a member asks about rules or fines, or for a reference-book request, staff refer to the Rules Snippet, check the New Arrivals Widget, and open the Recommendation Letter Viewer.

Result

A single internal "Command Center" Page in Zoho Creator for the Library Book Issue Request application was created using all eleven Page Builder elements.
