# Experiment 8

## Aim

To implement User Management and Role-Based Access Control in Zoho Creator to manage users, assign roles, and control access to Library Book Issue Management features and data based on the permissions granted to each role.

## Procedure

1. Log in to Zoho Creator and open the Users section under Manage.
2. Add the required users (Librarian, Library Counter Staff, Delivery Assistant) using Add User.
3. Review the user list and check each user's status (Active / Inactive).
4. Use the user action menu to resend invitations, add users to the application, make a user an admin, deactivate, edit, or delete a user.
5. Open a user's profile and assign the application, role, and permission (for example Library Counter Staff with Write permission).
6. Verify that each user can access only the features permitted by the assigned role.

## Workflow Chart

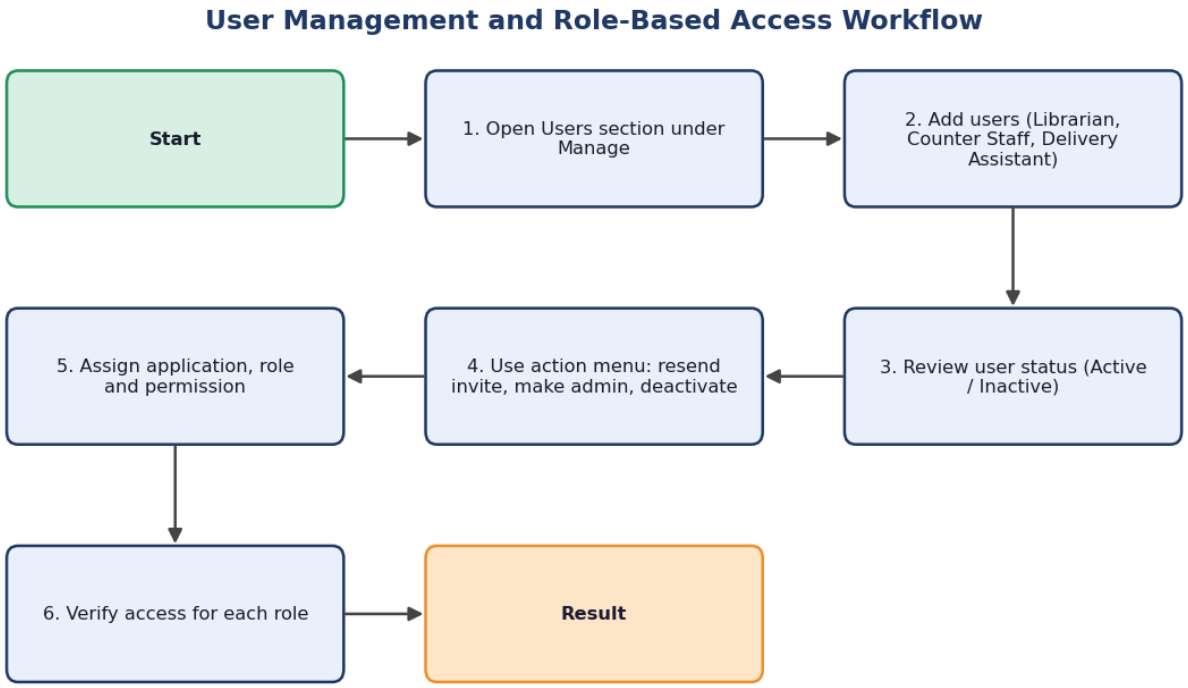

Figure 8: User management and role-based access workflow

## Result

Thus, User Management and Role-Based Access Control were implemented in Zoho Creator successfully for the Library Book Issue Management application.
