Experiment 9

Aim

To implement AI and data analytics using Zoho Zia in Zoho Creator to analyze library book issue data, identify borrowing trends, and generate predictions.

Procedure

1. Log in to Zoho Creator and open Zia (AI app builder / Build Agent).
2. Describe the library application to be built, for example "a library book issue application with member profiles, book catalog, issue requests and fine tracking".
3. Review the use cases and the data model generated by Zia.
4. Create the application and open the generated dashboard.
5. Add sample records (members, books, issue requests) and verify the dashboard metrics and charts.
6. Use the Build Agent to refine forms, reports, and dashboard components.
7. Analyze trends such as most borrowed categories, overdue counts, and eligibility/fine checks.

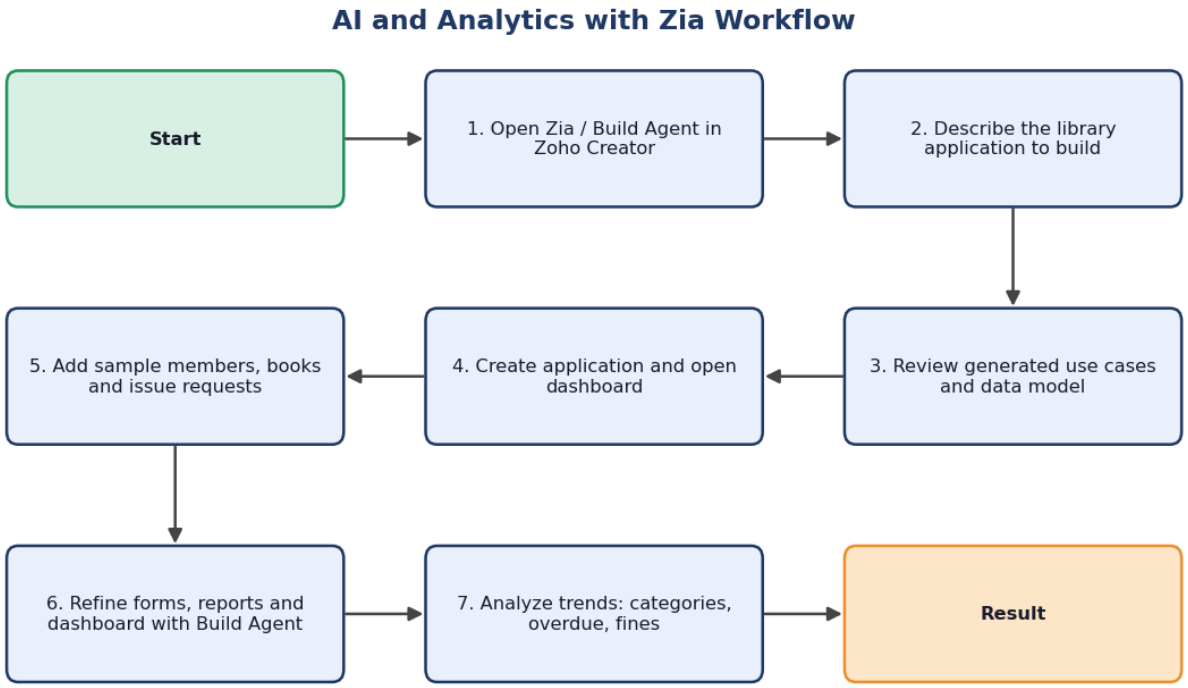

Figure 9: AI and analytics with Zia workflow

Result

AI and Analytics using Zia helps analyze library book issue data, visualize important metrics, and identify borrowing trends.
